

# Camera Recommendations

This section will detail some camera options you can consider for your livestreaming - it is not necessarily exhaustive as MAS is designed to be as compatible as possible with your hardware outlay. If the question is "will this work?", the answer is ~~most likely~~ hopefully "yes!".

The [MAS kit \(/hardware/mas-kit\)](/hardware/mas-kit) provides a [consumer camcorder \(/hardware/cameras/camcorders\)](/hardware/cameras/camcorders) option - and this often provides a great balance of portability and ease-of-use, but you should consider what may work best for your setup a balance off:

- Portability
- Ease of use (especially with respect to power and internet sources)
- Affordability
- Picture quality

*A camcorder is easy to use, power, and provides great picture quality. However a good one is expensive, and it is a little more complicated to get online.*

If your camera is not fixed to a wall/installed somewhere, you should definitely consider investing in a tripod. Many will provide stands and mounts for phones, tablets and other cameras at a great price, and will be good for pivoting and reducing shakiness.
