

Location Details

This step is optional and safe to skip.

By providing location information, MAS will be better able to serve content to serve local viewers back on Watch.

This data could be useful to admins on [Platform \(/platform\)](/platform) later when creating highlights or dealing with match/venue specific events.

Clicking Use my current location will request geolocation permissions if supported on your device to quickly fill in the physical address input.

Default Selection

MAS marks this step optional and you can safely skip if you'd prefer not to include it.
