

Scoring Vendor

This may be automatically filled for most sports.

You CANNOT change this when a match is underway!

The scoring vendor lets the overlay know where to source data from. MAS will provide a set of simple scoring inputs for every sports, these will usually just define the basics of who is participating and what the score/time is tailored for the sport being played.

However, MAS also partners with a suite of [third parties \(/scoring/third-parties\)](/scoring/third-parties) that can provide scoring data. This is especially useful if you're already familiar with existing scoring options for your sport and want to be able to read in scores from an existing data feed.

If in doubt, please select the MAS-provided option.

Default Selection

MAS will automatically pick its own scoring solution *only if no third parties exist*. You will otherwise need to pick this each time.
